

TECHNOCOM
MASTERBATCHES FOR POLYMERS

To the top of quality

About the Company

The "Technocom" company has been successfully working on the Ukrainian market since 1994 and now holds a leading position in the development and production of colour masterbatches (concentrates), additives and calcium carbonate. In 2010 an export program had been started. Our company has gained a reputation of a reliable business partner due to the high quality of our products and effective customer technical support, as well as flexible pricing and payment terms. We pay a particular attention to the development of economy-class products with an optimal price-quality ratio.

Today more than 500 companies from Ukraine, Russia, Belarus, Kazakhstan, Moldova, Lithuania, Poland and Great Britain are our clients. Our product range includes more than 60 standard colour masterbatches sold from stock and some individually developed colour-matched masterbatches.

Products

- masterbatches for polymers – white, black, colour;
- additives masterbatches for polyolefins;
- calcium carbonate-based masterbatches for polyolefins;
- special colour and additives masterbatches for polystyrene, PET, PA, PVC;
- mineral-filled compounds.

Quality

The components of the leading manufacturers from EC countries, Ukraine, Russia are used in production of masterbatches. The components are licensed to contact with food products. With the use of modern equipment the laboratory staff guarantees 24/7 quality control of raw material and output product (MFI, dE and dL in Cielab system, FPV and UV test, coefficient of friction, etc.) according to ISO, ASTM and GOST standards. Chalky masterbatches are manufactured as per trade mark Credolen; masterbatches of modifying additives - trade mark Additech; color, white and black masterbatches - trade mark Technofin, talc masterbatches – trade mark Talkolen.

Technocom is certified by EvrAzEs state registration to sell products in Customs Union countries of Belarus, Kazakhstan and Russian Federation. ISO 9001 quality control system was implemented in 2011.

Technology

The main technology used for the masterbatches manufacturing are modern twin-screw palletizing lines with 20-90 mm screw diameter, L/D=48, which allow production order capacity from several kilos to tens of tons. Our overall production capacity is about 10000 MT per year.
